State of Computer Science (CS) Highlight Summary

SB 193 (2020) establishes a requirement for the Department of Education to submit an annual report on public school students participating in computer science courses. The subsequent landscape report will gather relevant policy, student participation, and teacher development metrics and use them to further define, clarify and redirect ongoing state planning efforts.

This inter-office collaboration by the Kentucky Department of Education (KDE) seeks to not only provide information on current implementations but also guide future efforts to equitably provide access to Computer Science courses to all K-12 students.

Brief Notes on 2020-2021 School Year Report:

Comprehensive State Computer Science Plan	For the past year, KDE agency advocates, professional learning providers and education stakeholders have worked on crafting a plan that will highlight work already being done, and that yet to begin, to move CS education forward in the Commonwealth. While not yet accepted, the draft plan has been presented to the wider community of educators and stakeholders.
Course Restructure/Renaming	Some courses have been renamed due to the finalization of CTE pathway restructuring and redesign efforts. When changes are implemented, a phase-out process begins for the amended pathways and courses. Course name changes take effect this school year with complete pathway phase out/transition in the 2022-2023 school year. It is important to note that with the revision of course identifications, all pathway courses meet the 20 hours of programming requirement to count as CS on Code.org's Computer Science report.
Increased implementation	The incorporation of more courses into the definition of "Computer Science" through the course revision work, as well as the incorporation of online/virtual opportunities to participate in courses, has coincided with an increase in full path access (3 or more courses available) to computer science across school districts. However, while districts may have these opportunities, it still does not represent universal access for all middle or high school students in these districts.
K-8 Learning CS Opportunities	In the SY 2020-2021 Digital Readiness Survey, district technology leaders in 112 districts reported that they have K-8 schools providing CS learning opportunities to their students beyond participation in the annual Hour of Code activities. While there are several strategies used to provide these opportunities, it is an important note as we continue the conversations surrounding K-12 CS growth.
